

# 7 TOOLS FOR MANAGING A REMOTE TEAM

The main aim of Copler's trainers is to prepare A-class tech leaders, improved version of remote developers. In order to achieve it, they apply cutting-edge technologies and progressive tools created for efficient remote collaboration. These tools were handpicked as the most on target and performant and put to good use they simplify the process of manpower training and streamline collaboration between teammates.

## COMMUNICATION & COLLABORATION

It is hard to find a software developer who has no idea about this place. Here devs share code of their open source software and efficiently pull together different projects. Other useful options of this host include simplicity of working on personal projects and possibility of utilizing someone else's code with needed changes.

GitHub can be useful as a tool for supervising all adjustments of the repository, thus you can hold in check all work that has been made.

Brilliant and the most functional tool that allows focusing all means for communication in one place: this fully-fledged tool tracks Skype, emails and texting with a possibility of segmenting and channeling.

Slack is a Good Fit for dispersed development teams as it enables the talker to create the necessary amount of channels, that all or particular team members can see.

What is more important, GitHub, Trello cooperate with Slack.

This platform is ideal for sharing information between members of teams so any teammate with access to the Internet will get access to the files stored in the database of the project. It is not just storage of useful documentation and information, as Confluence is also used as extranet for teams.

## PROJECT & TASK MANAGEMENT

JIRA Software is built for every member of your software team to plan, track, and release great software.

This fully-fledged, multipurpose tool can hit the spot of many requirements as users may take an advantage of certain form of the tool. Management of projects, troubleshooting, tracking bugs and many other useful options are offered by this tools and every department of the company can use it in a different way, making it an inevitable part of efficient work of the whole enterprise.

Another important point about Jira is that it has many add-ons that make it even more performant for the project of any size.

This task management task has well-thought-out navigation and user-friendly management and will catch fancy of post-in notes admirers. It is the best way to visualize all projects and performers.

The tool looks like a whiteboard and you can create one for every project.

With help of such good layout it is clear from the first sight where help is needed so dev teams efficiently use it. With help of tool's notification system all works will be done in time as anyone will know the changes of the project status and when it is time to join teamwork. Participants are able to add comments and upload documents to the projects.

## FILE SHARING

Resource usability of Dropbox deserves the highest possible praise as here simplicity is the ultimate sophistication. The set of tools and features of this service is duly appreciated by everyone who has to work with great amounts of files and information. Plus, this cross-platform service allows working with files on the go from any web-connected handheld device. Integration to PC also guarantees that the user will be able to access files without the Internet connection.

This free tool is a must to people who work in teams as it is convenient, efficient and allows working in close rapport with teammates simultaneously. Add here integration with other Google services and you will receive one of the best tools for file sharing ever.
